

Implant #10 with Crown

Background: M.K. was congenitally missing #10 since childhood and required braces to open the space back to normal so that an implant crown can be placed. M.K. also needed a crown on #7 because it was a peg incisor. M.K. wore a flipper during treatment. During treatment, M.K. required different procedures, ask Dr. Kubikian about more in-depth information.

Testimonial: "It was not painful at all! I'm glad that I got the work done and I smile all the time now. And I am very confident with my smile. I am serious! I feel more attractive with my smile."
